U.S. Environmental Protection Agency Reviews Cleanup at the Cinnaminson Groundwater Contamination Superfund Site

The U.S. Environmental Protection Agency (EPA) is conducting its first five-year review of the **Cinnaminson Groundwater Contamination Superfund site**, located in Burlington County, New Jersey. This review seeks to confirm that the remedies selected by EPA in the 1990 Record of Decision (ROD) and the 2014 ROD remain protective of human health and the environment. The selected remedies consist of the following components:

- Extraction and treatment of contaminated groundwater from both the shallow and deep aquifers;
- Reinjection of treated water into the deep aquifer; and
- Installation and monitoring of additional wells to ensure the effectiveness of the remedy.

A summary of the Five-Year Review activities and an evaluation of the long-term protectiveness of the remedies will be included in the upcoming Five-Year Review report. **The report is scheduled to be completed by August 2019.**

What is an EPA Five-Year Review?

EPA inspects Superfund sites every five years to ensure that cleanups conducted remain fully protective of human health and the environment. These regular reviews, which are required by federal law when contaminants remain at a site, include:

- Inspection of the site and cleanup technologies;
- Review of monitoring data, operating data, and maintenance records; and
- Determining if any new regulatory requirements have been established since EPA's original cleanup decision was finalized.
